

AT Communication Systems

AT Communication is provider and manufacturer of products and systems for the commercial, defence and security markets. Additionally, AT Communications provides system solutions that combine group products into cross platform solution.

More than ever clients are expecting diverse products to operate and communicate in an integrated way allowing expanded functionality with minimal risk. AT Communication carefully designs and selects product from its range that enable this system integration capability.

All systems are designed and tested with the operational requirements obtained from our clients upon commencement of a project. Establishing these requirements from the beginning of a project ensures the system components and operating scenarios meet the intended application.

AT Communication engineers have significant experience both technically in engineering laboratories as well as practically with field testing and user experience playing a key part of ensuring our clients deploy systems effectively and efficiently.

AT Communication range of systems can be access from links on this page.
